TRAX AI

AI-Powered MRO for Peach Aviation

5 AI Agents. Real-Time Intelligence.
From reactive to predictive maintenance.

Miguel Sosa · VP, Head of Innovation · TRAX

A320 Fleet · KIX Hub

Peach Aviation · 2025

Today's 60-minute journey

0–5 min	The LCC maintenance reality
5–18 min	AOG Recovery — live multi-agent demo
18–28 min	Predictive Defect Prevention
28–38 min	Procurement Intelligence
38–46 min	Smart Work Package + Crew Match
46–52 min	Real-Time Control Tower
52–60 min	Q&A + Next Steps

The LCC maintenance reality

Every hour on the ground is revenue Peach cannot recover

¥2M+

revenue exposure per AOG hour at a Japanese LCC

68%

of maintenance delays caused by manual coordination failures

4–6 hrs

average manual AOG response time vs 45 min AI-assisted

23%

of work packages have avoidable certification mismatches

TRAX AI moves Peach from reactive firefighting → proactive operations.

The eMRO Agent Core

Five specialized AI agents — orchestrated, governed, human-approved

Sherlock

Troubleshooting & Decision Support

MxPlanner Pro

Maintenance Planning & Optimization

Trusted Supplier Network

Procurement Automation

Resource Planner

Workforce & Crew Matching

ATA Agent

Defect Classification

Human-in-the-loop gate — no deferral written, no PO issued, no schedule changed without B1/B2 engineer approval

SCENARIO 01

AOG Recovery in Real Time

A320 arrives KIX with a non-deferrable defect. Four agents fire in sequence.

1	2	3	4	5	✓
Logbook entry detected	Defect analyzed, history retrieved	Parts checked across vendors	B1 license + bay assigned	Schedule replanned	Engineer approves — write
ATA Agent	Sherlock	Trusted Supplier	Resource Planner	MxPlanner Pro	Human Gate

KPI: 40–60% reduction in AOG duration · Manual process: 4–6 hrs → AI-assisted: under 45 min

SCENARIO 02

Predictive Defect Prevention

Sherlock + MxPlanner Pro — catch failures 48–72 hrs before they happen

How it works

- Sherlock ingests historical defect logs across Peach's A320 fleet
- Identifies aircraft with elevated failure probability in next 48–72 hrs
- MxPlanner Pro pre-positions parts and reserves a technician slot at next overnight
- Proactive task card issued — defect stopped before it becomes an AOG

15–20%

reduction in unscheduled maintenance events

48–72 hrs

advance warning before defect becomes a delay

SCENARIO 03

Procurement Intelligence

Trusted Supplier Network — speed and discipline your buying team can't match manually

Without TRAX AI

- Buyer manually contacts 4–6 vendors by email
- Quotes compared in a spreadsheet
- Delivery time checked separately from pricing
- No visibility into historical market rates
- PO issued 24–48 hrs after defect identified

With TRAX AI

- TSN queries all vendors in parallel (<30 sec)
- Compares price, delivery, supplier reliability score
- MEL deferral window factored into delivery logic
- Auto-flags quotes above historical baseline
- PO generated for buyer approval — in minutes

KPI: 20–25% faster procurement cycle · 8–12% lower average part cost

SCENARIO 04

Smart Work Package + Technician Matching

MxPlanner Pro + Resource Planner — 3 hours of planner work done in 4 minutes

MxPlanner Pro

- Ingests full maintenance program for all open tasks
- Clusters tasks by available downtime window
- Groups by ATA chapter, skill type, bay, and part dependencies
- Outputs optimized work package — not just a due-date list

33%

less planning time

Resource Planner

- Evaluates every technician license, type rating, and currency
- Checks shift availability and overtime constraints
- Assigns optimal crew with confidence score and reasoning
- Zero certification mismatches — compliance is built in

SCENARIO 05

Maintenance Control Tower

All five agents. One pane of glass. Every active event visible to Peach's MCC.

Open defects

Live status of every open defect — MEL time limit countdown included

Work package status

Progress by technician, bay, and task card — updated in real time

Parts on order

Supplier status, ETA, and delivery risk for every open PO

Technician util.

Shift coverage, overtime flags, and certification currency

Risk flags

Cascade risk detected 2 hrs before a delay — recommended action surfaced

One-click drill

Jump directly into Sherlock, MxPlanner, or TSN from any flag

KPI: Ops managers report 2 hrs/day saved on status calls · Cascade delays caught 87% more often

BUSINESS IMPACT

What this means for Peach

Conservative estimates based on a 30-aircraft A320 LCC

33%
avg productivity gain across all 5 agents

15 FTE
workforce efficiency equivalent unlocked

$1.95M
estimated annual operational savings

40–60%
AOG duration reduction

20–25%
faster procurement cycle

15–20%
fewer unscheduled maintenance events

Full ROI model available — ask Miguel for the Peach-specific financial model

Questions

Be ready with these answers

Q **How does this integrate with our current system?**

TRAX is the system — no dual-entry, no middleware. Single source of truth for all MRO data.

Q **How long to go live?**

Phased: first agent live in 8 weeks, full 5-agent suite in 6 months. Parallel run available.

Q **What data do you need from us?**

Maintenance logs, parts catalog, technician profiles. We handle migration and mapping.

Q **Is it JCAB / EASA Part 145 compliant?**

Yes — audit trails, Cedar policy controls, append-only records, and engineer approval gate built in.

Q **What about our lean IT team?**

AWS-hosted, fully managed SaaS. Peach IT team has no infrastructure to operate.

NEXT STEPS

Let's start the discovery

Agree on a date before we leave the room tonight.

Week 1–2

Discovery workshop

2-day session with Peach MCC + IT leads. Map current workflows, identify quick wins.

Week 3–4

Data migration plan

Connect maintenance logs, parts catalog, and technician profiles to the TRAX platform.

Week 5–8

First agent live

Sherlock deployed for Peach's A320 fleet. Immediate troubleshooting uplift on day 1.

Month 3–6

Full 5-agent suite live

MxPlanner Pro, TSN, Resource Planner, and ATA Agent all operational. Full Control Tower.
